

NUDURA® INSULATED CONCRETE FORMS PRECUT PROGRAM

Program Overview

Nudura Insulated Concrete Forms (ICFs) are the most sustainable, durable and easy-to-install construction method in the industry. Our PreCut Program takes this efficiency to the next level by leveraging Building Information Modeling (BIM) software to supply project-specific, pre-cut forms that reduce time and waste on the jobsite during installation.

Why PreCut ICFs?

The Nudura PreCut Program revolutionizes ICF construction by delivering forms that have been pre-cut and labelled in a factory-controlled setting for the specific dimensions and layouts of each building.

The ICFs are packed to streamline the transition from the truck to the field. Builders use the provided instructions and 3D drawings to easily determine where each form goes.

PreCut Nudura ICFs ultimately reduce labor costs, minimize jobsite waste, expedite the stacking process and enhance accuracy compared to field-cut forms.

Features & Benefits

Optimized Form Cutting
Utilizing Nudura's proprietary "Form Cutting Optimization" in-plant results in greater quality control and reduced jobsite waste.

Streamlined Construction
With BIM technology, pre-cut ICFs are delivered with the exact dimensions needed for the project, speeding the installation process.

Labor Savings
Spend less time measuring and cutting forms and confirming layouts. With pre-cut ICFs, precision is built-in for greater craftsmanship.

Reduced Risk
With accurate pre-cutting of the ICF forms, this program minimizes the risk of jobsite errors and ensures greater quality assurance.

Reduced Learning Curve
The PreCut Program reduces the skill set and learning curve required for ICF installation.

Cost Savings
The PreCut Programs saves money by reducing labor requirements, time on-site and product waste.
