

DURABLE, DISASTER-RESISTANT BUILDING TECHNOLOGY FOR THE FUTURE

HercuWall™ is an insulated concrete panel system that provides superior strength and disaster resistance. Three times stronger than traditional building methods, HercuWall panels are fire* and disaster resistant. With wind ratings up to 235 mph, HercuWall is also high-velocity hurricane zone rated and Miami-Dade code compliant. Building with HercuWall results in a stronger, safer structure and mitigates disaster reconstruction.

*Suitable component in NFPA 285 assembly.
